## INTERNATIONAL PRELIMINARY REPORT ON PATENTABILITY

International application No.

PCT/EP2004/003608

Box No. V	Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement		
1. Statement			
Novelty (N)	Claims	2-6, 8-11	YES
	Claims	1, 7	NO
Inventive step (IS)	Claims		YES
	Claims	1-11	NO
Industrial applicability (IA)	Claims	1-11	YES
	Claims		NO
2. Citations and explanations (Rule 70.7)			
1. In the present report, reference is made to the following documents:			
D1: EP-A-1 180 652 (RANCO INC) 20 February 2002 (2002-02-20)			
D2: DE 43 19 652 A (BODENSEEWERK PERKIN ELMER CO) 15 December 1994 (1994-12-15).			
2. INDEPENDENT CLAIMS			
2.1 The present application fails to satisfy the requirements of PCT Article 33(1) because the subject matter of claims 1 and 7 lacks novelty (PCT Article 33(2)).			
Document D1 discloses (the references in brackets are to said document):			
claim 1: a method for operating a defrost heater in a refrigerating appliance (see column 17, lines 9 and 10), said method comprising the following method steps:

Box No. V

Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability;  
citations and explanations supporting such statement

- a) detecting a voltage level of the power supply for the defrost heater (see column 17, lines 36 and 37, and claim 23);
- b) determining a duty cycle of the supply current as a function of the detected voltage level (see column 17, lines 39 to 41);
- c) supplying current, in accordance with the determined keyed duty cycle, to the defrost heater (see column 17, lines 20 to 22).

claim 7: a refrigerating appliance with an integrated defrost heater (see claim 24) and with a detection circuit for detecting a voltage level at a supply connection of the defrost heater (see claim 2) and for producing a keyed control signal with a duty cycle that is dependent on the detected duty cycle (see claim 8) and an interrupter, which is actuated by the control signal, for the current supplied to the defrost heater (see figure 2a and column 6, lines 53 to 57).

In consequence, the subject matter of claims 1 and 7 lacks novelty (PCT Article 33(2)).

Box No. V

Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability;  
citations and explanations supporting such statement

## 3. DEPENDENT CLAIMS 2-6 AND 8-11

The remaining claims, claims 2-6 and 8-11, contain no features which, combined with the features of any claim to which they refer, meet the PCT requirements for inventive step. The reasons are as follows:

The features of dependent claims 2-6 and 8-11 have already been used for the same purpose in a similar method for the control of heating units (see in particular document D2, and also the other documents cited in the search report).

For a person skilled in the art, it would therefore be obvious to apply said features to like effect in a refrigerating appliance or a method as per document D1. In this way, he would arrive at a refrigerating appliance or a method, respectively, as per claims 2-6 and claims 8-11, without thereby being inventive.
